INDEX MS22-8

INDEX CNC multi-spindle automatic lathe
More productive with 8 spindles!

With the totally configurable INDEX MS22-8, we offer a machine concept that meets all requirements and the most stringent demands.

Eight main spindles, up to two swiveling synchronous spindles, and up to sixteen tool carriers, which can be configured in XYZ, enable high-productivity manufacturing. All aspects of the INDEX MS22-8 were developed using state-of-the-art manufacturing technologies. Generously dimensioned and freely accessible, the work area minimizes setup cost, especially for changeovers. Unhindered chip fall is ensured even with full tooling.
Designed to meet precise user requirements – the concept behind the INDEX MS22-8

**Machine design**
- Freely accessible work area, making setup particularly easy
- Highly dynamic slide with sliding guide (X axis)
- Non-wearing Z axis, due to quills with hydrostatic support
- Front-opening machine for bar machining
- Chuck part machining with robot loading and unloading
- Directed part discharge through linear handling
- Extremely fast swiveling synchronous spindles with C axis
- Swing arm is locked in machining position by three-piece Hirth coupling ensuring maximum rigidity
- Maximum of 6 tools with swiveling synchronous spindle for rear-end machining
The key element: it’s original when it originates from INDEX

Our hallmark – the spindle drum
The compact spindle drum ensures maximum precision in each position through the use of a three-piece Hirth coupling. The core is composed of eight fluid-cooled motorized spindles integrated in the spindle drum. An infinitely variable speed range, high tractive force, compact design, low maintenance, and the latest synchronous drive technology – these are the criteria that make an INDEX CNC multi-spindle automatic lathe stand out.

Independent speeds
During machining, it is always possible to program the optimum speed, which can still be varied during cutting, for each spindle position and each cutting edge of the tool. The results are optimum chipping, maximum surface quality, short production times per piece, and extended tool life. You can also machine high-strength materials that, until now, were hardly suitable for multi-spindle machines. It is also possible to make speed changes during drum indexing, thus avoiding any additional secondary processing times.

More than just turning
INDEX CNC multi-spindle automatic lathes with live tooling, C axis, and Y axis, give you access to entirely new processes, such as:
- off-center drilling and thread cutting
- inclined bores
- cross drilling
- contour milling
- hobbing (tooth cutting)
- polygon turning
Precise, fast, and flexible

Versatility is a strength of the INDEX MS22-8. Whether complex parts or different processes are involved – almost anything is possible
- A maximum of 16 tool carriers with 1 or 2 travel axes
- Y axis (optional)
- 1 or 2 swiveling synchronous spindles
- Variable use of tool carriers for internal and external machining
- Use of several tools per tool carrier possible
- Cross machining with live tools
- C axis and multi-edge turning for extended use options

Even more possibilities for rear-end machining with a swiveling synchronous spindle
- Up to 6 tools, 3 of which are live
- Fast swiveling motion and hydraulic locking of the swiveling synchronous spindle via a Hirth coupling
- Efficient chip fall, as machining takes place outside the main work area
- Numerous possibilities using live tools in conjunction with C and Y axes, as well as an electronic shaft

The double four-spindle machine – a highly productive upgrade option
- Additional part production time reduction due to simultaneous manufacturing of 2 workpieces
- 14 tool carriers with 1 or 2 axes (optionally also Y axis)
- 2 swiveling synchronous spindles
- 2 back-boring slides (option)
- Rear-end machining with up to 6 tools per synchronous spindle, with up to 3 spots for live tools

The same configuration level as an 8-spindle machine with simultaneous rear-end machining in two spindle positions
- Front-end machining on 6 main spindles
- Simultaneous cutoff-side machining on 2 swiveling synchronous spindles

Advantage: Reduced cycle time with time-determining rear-end machining
Simply more possibilities

The work area – virtually limitless machining capabilities for each spindle position
The tool carrier arrangement in the work area, without longitudinal sliding block, allows more than one tool to be used on each spindle. Available machining operations are therefore limited only by the tool holder. As a result, you can specify all production steps in all spindle positions. Another advantage: They have free chip fall.

Performance, as we understand it
Maximum productivity and cost-effectiveness of multi-spindle automatic lathes, combined with the precision and flexibility of CNC single-spindle lathes, is the formula for success of the INDEX MS22-8 multi-spindle automatic lathes.

Machining examples
1. External turning – internal turning
2. External turning – external turning
3. External live – internal live
4. External turning – internal live (sequential)
5. External live – internal turning (sequential)
6. External live – external turning (sequential)
For the most diverse technologies

**Gear cutting, hobbing**
- Coupled with electronic precision
- Provides maximum stability
- Gears in correct position relative to other surfaces or shaped elements
- Any angular offset can be programmed
- Greater tool service life due to shifting with Y axis

**Milling**
Milling with live tooling in the following variants
- Disk milling cutter in conjunction with C axis operation (transmit function)
- End milling cutter in conjunction with Y axis operation
- Plunge milling (graphic)

**Elliptical deburring of cross-drilled holes**
Uniform deburring (even chip removal) of cross-drilled holes based on interpolation of the C axis, X axis, and Z axis with live tooling.
Workpiece handling systems

Parts feed and discharge by 6-axis robot via the swivel disk interface to the external handling system

The workpiece handling system for chuck parts and bar segments can be used for 8-spindle machining with and without synchronous spindle, as well as for double 4-spindle machining. A 4x OP10 (first side) and 4x OP20 (second side) variant, with external turning station, is also available.

Linear shuttle with intermediate gripper for directed parts discharge from spindle position 8

Directed parts discharge from synchronous spindle in position 8, onto the internal conveyor belt
Directed parts discharge from synchronous spindle onto the internal conveyor belt

Axially-directed discharge via gripper transfers parts from the synchronous spindles in positions 7 and 8 to the internal conveyor belt for parts that may not be ejected.

Directional workpiece removal by synchronous spindle and linear shuttle

Damage-free and position-oriented delivery of components is provided from the synchronous spindle in position 8, or positions 7 and 8, to the external handling system at the front of the machine. All 3 axes of the machine-integrated handling system are NC-controlled.
The cockpit for easy integration of the machine in your business organization.

Focus on production and control – Industry 4.0 included.
The iXpanel operating concept provides access to networked production. With iXpanel, your staff always has all relevant information for efficient production right at the machine. iXpanel is already included as standard and can be individually extended. You can use iXpanel as you want it for your business organization – that’s Industry 4.0 tailored to your needs.

Future-proof.
iXpanel integrates the latest control generation SIEMENS S840D sl. Use iXpanel intuitively through an 18.5” touch monitor.

Productive.
Machine performance in maximized by optimally tuned processes in machine cycles with clear control screens. In addition, technology cycles are provided for frequently recurring machining operations and safe machine operation as well as for optimum machining quality.

Intelligent.
The machine always starts with the control home screen. Other functions can always be displayed on a second screen, and the operator enjoys direct, activity-related assistance already in the standard version, such as workpiece drawing, setup lists, programming tools, documentation, etc., right at the machine.

Virtual & open.
With the optional VPC box (industrial PC), iXpanel opens up the world of Virtual Machine and of simulation directly at the control (VM on Board). Thanks to the VPC-box (option), the machine can also be integrated easily and fully into IT networks and structures. You determine what additional applications are used on the VPC box!
